Trial objectives of SELECT

Added to SoC* in patients with established CVD and overweight/obesity...

Primary objective

Demonstrate that semaglutide s.c. 2.4 mg OW lowers the incidence of MACE vs placebo

Secondary objectives

Compare the effect of semaglutide 2.4 mg OW to placebo for

- Mortality
- CV risk factors
- Glucose metabolism
- Body weight
- Renal function

Exploratory objectives

Compare the effect of semaglutide 2.4 mg OW to placebo for

- Smoking status
- Hospitalizations

^{*}CV risk reduction standard of care
