

OBESITY *affects nearly every organ system* in the body¹

Some obesity-related concerns are specific to, or especially pronounced in, **women**

- Reproductive health 
- Heart health 
- Cancer 
- Urogenital 

Weight reduction in women with obesity may be associated with the following **benefits**²:

- Reduced dysmenorrhea 
- Lower androgen levels 
- Reduced urinary stress incontinence 
- Lower risk of gynecological & breast cancers 
- Improved fertility & ovulation 
- PCOS symptom management 

A **better understanding** of how obesity may impact women may lead to **improvements in their overall health**
